

Imunon to Hold Third Quarter 2022 Financial Results and Business Update Conference Call on Monday, November 14, 2022

November 7, 2022

LAWRENCEVILLE, N.J., Nov. 07, 2022 (GLOBE NEWSWIRE) -- Imunon, Inc. (NASDAQ: IMNN), a clinical-stage drug-development company focused on DNA-mediated immunotherapy and next-generation vaccines, announced today that the Company will host a conference call at 11:00 a.m. ET on Monday, November 14, 2022 to discuss financial results for the third quarter ended September 30, 2022 and provide an update on its clinical development of GEN-1, a DNA-based interleukin-12 (IL-12) immunotherapy in Phase II clinical development for the treatment of advanced-stage ovarian cancer, and its preclinical studies of PLACCINE, a proprietary, multivalent DNA-based plasmid technology utilizing synthetic, non-viral delivery vectors, being evaluated in proof-of-concept studies for superiority over current mRNA vaccines.

To participate in the call, interested parties may dial 866-777-2509 (Toll-Free/North America) or 412-317-5413 (International/Toll) and ask for the Imunon, Inc. Third Quarter 2022 Financial Results Call. The call will also be broadcast live at www.imunon.com. The call will be archived for replay until November 28, 2022. The replay can be accessed at 877-344-7529 (U.S. Toll Free), 855-669-9658 (Canada Toll Free) or 412-317-0088 (International Toll) using replay access code 8042590. An audio replay of the call will also be available at www.imunon.com for 90 days.

About Imunon, Inc.

Imunon is a fully integrated, clinical stage biotechnology company focused on advancing a portfolio of innovative treatments that harness the body's natural mechanisms to generate safe, effective, and durable responses across a broad array of human diseases, constituting a differentiating approach from conventional therapies.

Imunon has two platform technologies: the TheraPlas[®] platform for the development of immunotherapies and other anti-cancer nucleic acid-based therapies, and the PLACCINE platform for the development of nucleic acid vaccines for infectious diseases and cancer. The company's lead clinical program, GEN-1, is a DNA-based immunotherapy for the localized treatment of advanced ovarian cancer currently in Phase II development. GEN-1 works by instructing the body to produce safe and durable levels of powerful cancer-fighting molecules, such as interleukin-12 and interferon gamma, at the tumor site. Additionally, the company is conducting preclinical proof-of-concept studies to validate its PLACCINE platform by using a vaccine design comprising a single plasmid DNA molecule containing a sequence encoding more than one of the SARS-CoV-2 spike antigen variants. Imunon's platform technologies are based on the delivery of nucleic acids with novel synthetic delivery systems that are independent of viral vectors or devices. Imunon will continue to leverage these platforms and to advance the technological frontier of plasmid DNA to better serve patients with difficult-to-treat conditions.
