

## **IMUNON to Participate in the A.G.P./Alliance Global Partners Virtual Biotech Conference on November 30, 2022 – December 1, 2022**

November 22, 2022

**LAWRENCEVILLE, N.J., Nov. 22, 2022 (GLOBE NEWSWIRE) -- IMUNON, Inc. (NASDAQ: IMNN)**, a clinical-stage drug development company, today announced that Dr. Corinne Le Goff, President and Chief Executive Officer and Mr. Jeffrey Church, Executive Vice President and Chief Financial Officer will participate in A.G.P.'s Biotech Conference taking place virtually on November 30, 2022 through December 1, 2022.

The event will consist of one-on-one virtual investor meetings. If you are an institutional or retail investor and would like to request a one-on-one meeting with IMUNON management, please contact your A.G.P. representative. A copy of IMUNON's corporate presentation is available [here](#).

### **About IMUNON, Inc.**

IMUNON is a fully integrated, clinical-stage biotechnology company focused on advancing a portfolio of innovative treatments that harness the body's natural mechanisms to generate safe, effective and durable responses across a broad array of human diseases, constituting a differentiating approach from conventional therapies.

IMUNON has two platform technologies: the TheraPlas modality for the development of immunotherapies and other anti-cancer nucleic acid-based therapies, and the PLACCINE modality for the development of nucleic acid vaccines for infectious diseases and cancer. The company's lead clinical program, GEN-1, is a DNA-based immunotherapy for the localized treatment of advanced ovarian cancer currently in Phase II development. GEN-1 works by instructing the body to produce safe and durable levels of powerful cancer-fighting molecules, such as interleukin-12 and interferon gamma, at the tumor site. Additionally, the company is conducting preclinical proof-of-concept studies to validate its PLACCINE modality by using a vaccine design comprising a single plasmid DNA molecule containing a sequence encoding more than one of the SARS-CoV-2 spike antigen variants. IMUNON's platform technologies are based on the delivery of nucleic acids with novel synthetic delivery systems that are independent of viral vectors or devices. IMUNON will continue to leverage these modalities and to advance the technological frontier of plasmid DNA to better serve patients with difficult-to-treat conditions.
